To whom it may concern

I am studying biophysics in the Laboratory of Prof. A. Wada (Department of Physics, Faculty of Science, University of Tokyo).

Bhagwan Shree Rajneesh is quite helpful for us to integrate materialistic science and humanity.

Biological scientists, including molecular biologists, biochemists and biophysicists have found that the living systems have huge amount of know-hows concerning "how to survive". But still we know few things concerning "Who am I to survive?".

It is dangerous for humanity to regard ourselves as mere surviving systems. Bhagwan has been constantly trying to remind us of the question "Who am I?".

I came across with him two years ago through his lecture books. I have been deeply impressed by his profound intelligence. He can be a perfect scientist and, at the same time, a completely irrational poet. I became his disciple last year and attended two world annual celebrations ('82, '83). Now I am convinced that, at least for us scientists, Bhagwan is helpful.
