TO WHOM IT MAY CONCERN

I have been acquainted with Bhagwan's teachings for 4 years. I am a graduate of the University of Connecticut where I received a B.A. degree in Medical Technology in 1971. I did my internship at St. Francis Hospital and Medical Center in Hartford, CT and am registered with the American Society of Clinical Pathologists. I have worked as a Medical Technologist in many areas of the Lab. including research under a government grant.

I began reading Bhagwan's books about 4 years ago and my immediate impression: what a beautiful and unique approach he had to Science and Technology. Most religious leaders feel you can't have religion and science together. Countries like India have gone for the religion and America has gone for the Science and Technology and these countries are really out of balance. It really made sense to me because I've always felt a need for both.

Now that I am living at Rajneeshpuram I am able to experience first hand what he has been talking about and seeing His dream come true. We live well, and having the technology and religiousness both we have been able to build a beautiful city and live in a loving, rich atmosphere.

How can a man of such knowledge and insight not be considered an exceptional leader?

Sincerely,

Karen McMullin
